Journal - Elsevier - Carbon nanotubes have long been recognized as the stiffest and strongest man-made material known to date. In addition, their high electrical conductivity has roused interest in the area of electrical appliances and communication related applications. Carbon nanotube "polymer composites: Chemistry, processing ... - The inherent specificity and electrochemical reversibility of enzymes pose them as the biorecognition element of choice for a wide range of metabolites. To use enzymes efficiently in biosensors, the redox centers of the protein should have good electrical communication with the transducing electrode, which requires either the use of mediators or tedious biofunctionalization approaches. Direct metabolite detection with an n-type accumulation ... -
